CUB proteins have been associated with CC regulating development, modulating cellular processes and preventing CC infectious disease. NHP nucleotide sequences are useful for gene therapy CC of physiological disorders or diseases. NHP oligonucleotides are useful as hybridisation probes for screening libraries and assessing gene CC patterns. NHP nucleotide sequences are useful for detecting mutant or CC inappropriately expressed NHPs (for example, those proteins associated CC with obesity, high blood pressure, connective tissue disorders and CC infertility) for the diagnosis of a disease. The polynucleotides may also be used in screening for drugs effective in the treatment of symptomatic CC or phenotypic manifestations of perturbing the normal function of NHP in CC genetically engineer host cells to express such products are used to constructs encoding NHP products are used to the tells allow for the identification of compounds that bind to NHP CC receptors or trigger NHP-mediated pathways.
                                                                                                                                                                                           밁

NHP oligonucleotides are useful as hybridisation probes for screening libraries and assessing gene patterns. NHP nucleotide sequences are useful for detecting mutant or inappropriately expressed NHPs (for example, those proteins associated with obesity, high blood pressure, connective tissue disorders and infertility) for the diagnosis of a disease. The polynucleotides may also be used in screening for drugs effective in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body. Nucleotide constructs encoding NHP products are used to genetically engineer host cells to express such products in vivo. These host cells allow for the identification of compounds that bind to NHP receptors or trigger NHP-mediated pathways.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence represents a novel human protein (NHP) containing a domain (an extracellular domain). CUB proteins have been associat regulating development, modulating cellular processes and prevent infectious disease. NHP nucleotide sequences are useful for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel nucleic acid encoding human CUB-domain containing protein, useful for drug screening, diagnosis and treatment of physiological disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2001-290917/30.

CUB proteins have been associated with CC regulating development, modulating cellular processes and preventing CC infectious disease. NHP nucleotide sequences are useful for gene therapy CC of physiological disorders or diseases. NHP oligonucleotides are useful cas hybridisation probes for screening libraries and assessing gene CC patterns. NHP nucleotide sequences are useful for detecting mutant or CC inappropriately expressed NHPs (for example, those proteins associated CC with obesity, high blood pressure, connective tissue disorders and CC infertility) for the diagnosis of a disease. The polynucleotides may also be used in screening for drugs effective in the treatment of symptomatic CC ob used in screening for drugs effective in the treatment of symptomatic CC or phenotypic manifestations of parturbing the normal function of NHP in CC or phenotypic manifestations of parturbing the normal function of the body. Nucleotide constructs encoding NHP products are used to construct encoding NHP products are used to construct allow for the identification of compounds that bind to NHP constructs allow for the identification of compounds that bind to NHP constructs are used to the construction of the products are used to the construction of the products are used to construct the construction of compounds that bind to NHP constructs are used to the construction of the products are used to construct the construction of compounds that bind to NHP constructs are used to construct of the products are used to construct the construction of compounds that bind to NHP constructs are used to construct the construction of compounds that bind to NHP constructs are used to construct the construction of compounds that bind to NHP constructs are used to construct the construction of compounds that bind to NHP construction of the construction of compounds that bind to NHP construction of the construction of the construction of t

```

The invention relates to neuropilin-like polypeptide (neuropilin-Hyl and neuropilin-Hyl) and their corresponding nucleic acids. The neuropilin-like polypeptides and polypucleotides are useful in modulating neuronal growth regenerative capacity, treating neurodegenerative diseases, diagnosing and mapping genetic neuronal defects and degenerative disease like Alzheimer's disease and for treating learning and memory disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sequences of the invention are useful for treating diseases. Shy-Drage system e.g. Parkinson's disease, Huntington's disease, Shy-Drage syndrome, amyotrophic lateral sclerosis, and traumatic disorders e.g. spinal cord disorders, head trauma and cerebrovascular diseases e.g. stroke, ulcers, immune deficiencies and immune disorders, infections by hepatitis viruses, human immunodeficiency virus (HIV), herpes viruses, mycobacteria, Leishmania spp., malaria spp., autoimmune disorders e.g. multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary inflammation, autoimmune thyroiditis, diabetes mellitus, graft-versus-host disease, myacthenia gravis and autoimmune inflammatory eye disease. The nucleic acids of the invention are used in gene therapy techniques. The present sequence is human neuropilin-Hyl protein. Neuropilin-Hyl gene is located on chromosome 6q21.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      nerve regeneration; neurodegenerative disease; learning disorder; memory disorder; Alzheimer's disease; ampiogenesis; neovascularisation; organ growth; nervous system lesion; cancer; cell proliferation; cell differentiation; stem cell growth factor activity; parkinson's disease; Huntington's disease; amyotrophic lateral sclerosis; haematopoiesis; myeloid cell disorder; lymphoid cell disorders; anaemia; platelet disorder; thrombocytopaenia; liver fibrosis; lung fibrosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      platelet disorders e.g. thrombocytopaenia, plastic anaemia and parox nocturnal haemoglobinuria and is used in nerve tissue growth or regeneration, in wound healing, tissue repair and replacement and in healing of bones, incisions and ulcers. Compositions comprising the healing of bones, incisions and ulcers. Compositions comprising the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                They are also useful for inducing angiogenesis, neovascularisation, well as organ growth and development e.g. heart and other tissues. Antagonists of neuropilin-like polypeptides are useful for treating cancers and other malignant diseases. Neuropilin is used to treat

Control of the cDNAs are useful for proteins and encoding cDNAs are useful controlled co gene chips and as a DNA antigen. The present sequence represents encoding the proteins and the coding regions of the cDNAs. Also included is a nucleic acid array comprising the cDNAs attached to a surface used for detecting full-matches or mismatches to the cDNAs. The genes for neuropilin-Hyl and Hy2 are located on human chromosome 6q21. The nucleic acid array is useful for detecting full-matches or mismatches The neuropilin-Hyl. invention ion relates to neuropilin-Hy1 an isolated neuropilin-like polypeptide and neuropilin-Hy2, the full length cDNAs

                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a polypeptide sequence which is isolated from lymph node stromal cells of fsn -/- mice. The polypucleotides and their polypeptides are useful for treating an inflammatory disorder, disorder of immune system and cancer selected from epithelial, lymphoid, myeloid, stromal and neuronal cancers, a viral disorder, in particular HIV infection and for modulating the growth of blood vessels. The polypeptides are useful for treating a tumour necrosis factor (PNF) mediated disorder, such as those selected from arthritis, inflammatory bowel disease and cardiac failure and a fibroblast growth factor-mediated disorder. It is also useful in assays to determine biological activity, to raise antibodies, to isolate corresponding ligands or receptors, to quantify levels of protein or cognate corresponding ligand or receptors, as antiinflammatory agents, and in compositions for the treatment of skin, connective tissue and tissue, as a chromosome marker or tags in the identification of a genetic disorder.

The invention relates to polynucleotides (I) encoding diagnostic and Ct therapeutic (DITHP) polypeptides (II), which include e.g. enzymes, CC and proteins involved in growth and development and receptors. (I) and CC (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate DITHP expression. For example, (I) and CC (II) may be used to treat disorders associated with decreased polypeptide (II) may be used to treat disorders associated with decreased polypeptide expression by rectifying mutations or deletions in a patient's genome, CC or supplementing the patient's own production of them. (I) and (II) may be used to treat diseases, for example, cell proliferative disorder, CC crohn's disease, acquired immune deficiency syndrome (AIDS), lymphoma, CC (I) may be used to produce the DITHPs, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative
                                                                                                                                                                                                                                                                                                                                                                                                                       Dufour GE,

The anti-DITHP antibodies and antagonists may also be used to down regulate expression and activity. The anti-DITHP antibodies may also be used as diagnostic agents for detecting the presence of DITHPs in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). AAU19415-AAU19625 represent human diagnostic and therapeutic (DITHP) polypeptides of the invention.

CC polynuclectide comprising. Oligonuclectides and antibodies are useful for CC detecting MDDT in a sample or for assessing toxicity of a test compound, CC in a diagnostic test for a condition or a disease associated with the CC expression of MDDT in a biological sample, for detecting (I) in a sample, CC and for purifying (I) from a sample. A composition comprising (I), an CC agonist or antagonist is useful for treating a disease or condition CC associated with decreased or increased expression of functional MDDT. CC (I) or (II) are useful for diagnosing, treating or preventing disorders are sected from a cell proliferative disorder such as arteriosclerosis, cirrhosis, hepatitis, psoriasis, and cancer and an CC elected from a cell proliferative disorder such as arteriosclerosis or Theumatolid arthritis. (II) are useful for creating knockin humanised CC allergy, anaemia, asthma, atherosclerosis, gout, multiple sclerosis or CC elected from a characy, to generate a transcript image of a tissue or cell cype, for detecting differences in the chromosomal location due to translocation or inversion among normal, carrier or affected individuals and as hybridisation probes for mapping naturally occurring genomic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  specification, a naturally occurring polypeptide comprising a sequence having at least 90% identity to (I) or a biologically active or immunogenic fragment of (I). (I) is useful for screening a compound for effectiveness as an agonist or antagonist, for screening a compound that specifically binds (I) or modulates the activity of (I), and for preparing a polyclonal or monoclonal antibody by hybridoma technology. Nucleic acids (II) (AB072449-AB072700) encoding (I) are useful for screening a compound for effectiveness in altering expression of a target screening a compound for effectiveness in altering expression of a target

The invention relates to an isolated human disease detection and CC treatment (MDDT) polypeptide (I) selected from a polypeptide having a sequence selected from 254 sequences (ABP51331-ABP51484) given in the Sequence specification, a naturally occurring polypeptide comprising a sequence CC immunogenic fragment of (I). (I) or a biologically active or CC immunogenic fragment of (I). (I) is useful for screening a compound for CC preparing a polyclonal or monoclonal antibody by hybridoma technology. CC Nucleic acids (II) (AB072449-AB072700) encoding (I) are useful for CC polynucleotide comprising. Oligonucleotides and antibodies are useful for CC expression of MDDT in a sample or for assessing toxicity of a test compound, in a diagnostic test for a condition or a disease associated with the CC expression of MDDT in a biological sample, for detecting (II) an sample, CC and for purifying (I) from a sample. A composition comprising (I), an associated with decreased or increased expression of functional MDDT. CC associated with aberrant expression of MDDT, where the disorders are selected from a cell proliferative disorder such as arteriosclerosis, associated with aberrant expression of MDDT, where the disorders are consociated with aberrant expression of MDDT, where the disorders are selected from a cell proliferative disorder such as arteriosclerosis, continuals or transgenic animals to model human disease, in somatic or rheumatoid arthitis. (II) are useful for creating whockin humanised or troe differences in the chromosomal location due to
                                            germline gene therapy, to generate a transcript for detecting differences in the chromosomal location due to translocation or inversion among normal, carrier or affected individuals translocation or inversion among normal, carrier or affected individuals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            06-SEP-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Dufour GE,
```

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and thempay, drug screening, assays for recontractivity activity and status and thempay.

Novel nucleic acids and polypeptides, useful such as central nervous system injuries -

for

treating disorders

         of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence,3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    29-JUL-1999;

CC Nucleic acids (II) (AB072449-AB072700) encoding (I) are useful for CC screening a compound for effectiveness in altering expression of a target CC polynucleotide comprising. Oligonucleotides and antibodies are useful for CC detecting MDDT in a sample or for assessing toxicity of a test compound, in a diagnostic test for a condition or a disease associated with the CC expression of MDDT in a biological sample, for detecting (I) in a sample, and for purifying (I) from a sample, a composition comprising (I), an CC agonist or antagonist is useful for treating a disease or condition CC associated with decreased or increased expression of functional MDDT. CC (I) or (II) are useful for diagnosing, treating or preventing disorders are Selected from a cell proliferative disorder such as arteriosclerosis, cc altergy, anaemia, asthma, atherosclerosis, gout, multiple sclerosis or CC altergy, anaemia, asthma, atherosclerosis, gout, multiple sclerosis or CC animals or transgenic animals to model human diseases, in somatic or cell type, for detecting differences in the chromosomal location due to CC translocation or inversion among normal, carrier or affected individuals and both which test the proposed for manylog and the chromosomal location due to cardinate the hybridistic proposed for manylog normal, carrier or affected individuals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

(I) is useful for screening a compound for effectiveness as an agonist or antagonist, for screening a compound the specifically binds (I) or antagonist, for screening a compound the specifically binds (I) or modulates the activity of (I) and for
                                                                                                                   17-JAN-2001;

(I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopolitic-related diseases, especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK8764 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy -

The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, haematopoiesis regulating activity in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                  Novel nucleic acids and polypeptides, useful such as central nervous system injuries -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic;

                                                                                                                                                                        The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213). With nootropic, immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Inmune system suppression, Activinyinhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S discreters
                                                                                                                                        C.N.S disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         seq length: 100 seq length: 700
